

## **JDocs: KEY CLINICAL TASKS**

#### JDocs overview

<u>JDocs</u> is a Framework that describes the many tasks, skills and behaviours that should be achieved by doctors at defined early post-graduate year levels, and will assist in their development towards a surgical or other proceduralist career. It provides guidance and support in becoming a safe, competent, professional doctor at work and a collaborative member of the healthcare team. To relate the Framework to the workplace, key clinical tasks have been developed that represent professional activities undertaken in the clinical workplace, e.g. leading a ward round and discharging a patient.

#### What are Key Clinical Tasks?

Key clinical tasks (KCTs) represent the daily professional activities undertaken by the junior doctor, where the level of performance can be observed and feedback provided. These are multi-competency constructs around real clinical work and are supported by the competencies of the JDocs Framework that describe the skills, knowledge and attitudes expected of the junior doctor. KCTs are based on Entrustable Professional Activities (EPAs; Olle ten Cate<sup>1</sup>), where judgements are made against differing levels of supervision to establish a deeper understanding of the acceptable level of clinical competence required for a particular stage of learning (postgraduate year (PGY) 1–3+).

KCTs use the following levels of supervision to inform feedback and help the doctor gauge his/her progress as they develop their skills and knowledge to demonstrate their readiness for the registrar role.

Needs more supervision for development	
2. Can perform with supervision	
3. Can perform with minimal supervision (observation)	
4. Can perform with supervision at a distance (supervisor not present)	

Proficiency in each task at supervision level 4 (*Can perform with supervision at a distance – supervisor not present*) should be achievable by the end of PGY3. Assessment of a KCT can be captured in a number of ways, e.g. signed KCT, as part of an end-of-term assessment, and/or built into references and referee reports. Evidence of progress and performance in these tasks can be uploaded to the JDocs ePortfolio.

#### **Key Clinical Tasks for Supervisors**

Supervisors can observe junior doctors performing a KCT on a number of occasions and judge their performance using the levels of supervision. The competencies of the JDocs Framework that describe the task are progressive (PGY1–3+) and can be useful when providing feedback to the prevocational doctor; they can also be used to encourage ongoing development of the relevant knowledge, skills and attitudes necessary to proficiently perform a task unsupervised (with supervision at a distance).

Successful completion of a task at supervision level 4 demonstrates the junior doctor has performed the task safely and reliably without direct supervision. The supervisor will have also checked with the doctor and the senior nurse (or other) afterwards that all had gone well. To ensure authenticity using the mobile version of a task, the supervisor will receive email notification where he/she has judged the doctor's performance at supervision level 4.

#### **Key Clinical Tasks for Prevocational doctors**

The doctor is encouraged to seek supervisor support to be observed on a number of occasions, to gauge their

<sup>&</sup>lt;sup>1</sup> Olle ten Cate. Nuts and Bolts of Entrustable Professional Activities: J Grad Med Educ. 2013 Mar; 5(1): 157–158. doi: 10.4300/JGME-D-12-00380.1

current level of proficiency in performing a task. In addition to any verbal feedback, a supervisor may use the competencies of the Framework to help guide further development of relevant skills, knowledge and attitudes to proficiently perform a task unsupervised (with supervision at a distance). Successful completion of a task at supervision level 4 demonstrates the doctor can perform the task safely and reliably without direct supervision. To ensure authenticity using the mobile version of a task, the Supervisor will receive email notification where he/she has judged the doctor's performance at supervision level 4.

Following supervisor observation using the mobile version of the KCT, the doctor's progress will be automatically recorded in the JDocs ePortfolio, where the doctor can access feedback to help prompt reflection and guide further personal learning and development.

# **How to access Key Clinical Tasks**

There are two ways to access KCTs.

1. Download as a PDF document from JDocs website (http://jdocs.surgeons.org)

#### **Key clinical tasks**

- Admit/consult the new patient
- Lead a ward round
- Manage peri-operative care
- Manage the sick patient
- Coordinate and lead open disclosure
- Deliver bad news
- Manage CPR & trauma calls
- Communication (Handover/ISBAR)
- Participate in M & M meetings
- Manage/chair interprofessional ward/unit meeting
- Discharge a patient

- Display professional behaviours in the workplace
- Supervision of junior doctors
- Plan an operating list
- Plan/participate in the Op Room journey
- Perform basic procedures/operations (MALT)
- 2. Access the mobile KCT form from the JDocs ePortfolio (available only via JDocs subscription)

Doctors can prepare the KCT form on a mobile device in readiness for observation, then hand the mobile device to the supervisor. The supervisor is then able to review the task, enter free text comments and/or use the competencies of the Framework and levels of supervision to inform feedback. Feedback is then recorded directly in the individual's JDocs Portfolio as a PDF document. There is no supervisory workflow for the JDocs ePortfolio and feedback is for the prevocational doctor's information only.

#### For further information, please contact:

# **Key Clinical Task**

Manage peri-operative care							
First name		Last name					
Date		Hospital					
Term		Supervisor					
Description of task	Medical management of the surgical patient should be integral to the resident role in PGY1–3. Asking for senior and/or physician review is part of this. By PGY3 the doctor should be competent across the many threads of care as described below.						
Activities	<ul> <li>Able to communicate clearly</li> <li>Able to work well within a team</li> <li>Provides effective supervision</li> <li>Able to recognise and respond to instances of uncertainty</li> <li>Prescribe and administers pain management safely (noting local approaches)</li> <li>Understands medicines with high-risk results         <ul> <li>Diabetes</li> <li>Anticoagulation/ DVT prophylaxis</li> <li>Cardiac and respiratory issues</li> <li>Fluid management</li> <li>Sensible use of blood products</li> <li>Antibiotic prophylaxis (cf. treatment)</li> </ul> </li> </ul>						
	Communication		×	Medical Exper		×	
Competencies	Collaboration & Teamwork		<b>X</b>	Professionalism & Ethics		X	
of JDocs Framework	Health Advocacy		×	Scholarship & Teaching		X X	
	Judgement – Clinical Decision Maki  Management & Leadership	ng	×	Technical Expertise			
Assessment guide	Observe 6–8 times						
	Needs more supervision for development						
	2. Can perform with supervision						
Performance	3. Can perform with minimal supe	rvisio	n (obs	ervation)			
	4. Can perform with supervision at a distance (supervisor not present)			present)			
	JDocs competencies can be useful to frame feedback						
Additional comments							
Signed by supervisor							

## A guide for feedback

## Manage peri-operative care - expected knowledge, skills and attitudes

#### **Guidance for Supervisors**

Supervisors can observe junior doctors performing this key clinical task, on a number of occasions, and assess their performance using the standards of the JDocs Framework, which may be of assistance in providing feedback. This feedback can be useful to guide ongoing development of the relevant knowledge, skills and attitudes required to proficiently manage peri-operative care and perform this task unsupervised (with supervision at a distance). Identify areas for further development (🗸).

#### **Guidance for Prevocational Doctors**

The junior doctor is encouraged to seek supervisor support to obtain regular feedback on their proficiency in performing this task. The competencies of the Framework, listed below, describe the levels applicable across the early prevocational years (PGY1–3) and can help the doctor further develop the relevant skills, knowledge and attitudes necessary to proficiently **manage peri-operative care** and demonstrate they can perform this task unsupervised (with supervision at a distance).

	k unsupervised (with supervision at a distance).	3
Со	llaboration & Teamwork	✓
1.	Understand both personal and collective responsibility within the team to ensure the safety of patients	
2.	Maintain accurate records and follow-up on investigation results	
3.	Maintain clear, accurate and concise patient records of assessment, clinical issues and planned management	
4.	Work within the team to identify and remedy errors, particularly using a systems approach	
5.	Collaborate effectively with other specialist teams involved in the patient's care	
6.	Encourage participation of all team members and allocate appropriate tasks to junior members	
Со	mmunication	
1.	Accurately document medicine prescription, calculations and administration, using recommended terminology, including symbols and abbreviations	
2.	Provide updates to the current health team, e.g. new critical issues or changes in a patient's condition	
3.	Attend to clarity, structure and appropriate content for specific correspondence, e.g. handover notes and investigation requests	
4.	Keep patients and significant others informed of management plan progress	
5.	Communicate effectively within multidisciplinary teams, reflecting an understanding of, and respect for, different health professional perspectives	
6.	Communicate clearly and compassionately when breaking bad news or discussing difficult topics	
	(deterioration, poor prognosis, resuscitation and end-of-life issues)	
7.	Collect and collate relevant information from other team members or specialist teams pertinent to decision making or patient management	
8.	Contribute to analysis of complex cases and imperfect outcomes, and identify any changes needed to care processes or systems	
He	alth Advocacy	
1.	Demonstrate awareness of the cultural diversity and requirements of patients	
2.	Advise families and carers according to the patient's condition and wishes	
3.	Note and understand the Enduring Power of Attorney and the Advanced Care Directives	
4.	Recognise health needs of an individual patient beyond their immediate condition	
5.	Take into account the impact of history and experience of Indigenous Australians/Māori people, and	
	their spirituality and relationship with the land	
6.	Identify any gaps between management plan and patient wishes	
7.	Work with the patient/family/carers to develop a management plan that addresses the needs and preferences of the patient	
Juc	dgement & Clinical Decision Making	
1.	Use basic algorithms and decision trees to manage common problems	
2.	Recognise personal limitations and ensure appropriate supervision	
3.	Use mechanisms that minimise error, e.g. clinical checklists, Surgical Safety Checklist, handover	

	protocols, unit protocols				
4.	. Retrieve and use high-quality information from electronic sources for clinical decision making.				
	Document decisions and reasons for same				
5.	Recognise when advice and guidance is required in development of management plans				
6.	Undertake continued timely reviews of patient progress and respond appropriately to any changes				
	of condition	Ш			
7.	Recognise when a management plan is failing and, where appropriate, seek senior input to devise an				
	alternative plan				
8.	Recognise instances of uncertainty and conflicting values, and able to alleviate their potential impact				
Ma	inagement & Leadership				
1.	Identify and follow patient care protocols, for example:				
	• hand hygiene				
	• handover				
	venous thromboembolism prophylaxis				
2.	Accept opportunities for increased autonomy and patient responsibility under direction of				
	supervisor				
3.	Demonstrate appropriate self-awareness and insight				
Me	edical Expertise				
	· · · · · · · · · · · · · · · · · · ·				
1.	Identify and provide relevant and succinct information when ordering investigations. Ensure tests				
2.	and results are documented  Know and work within hospital, state and government policies and legislation relating to prescribing.				
۷.	Make use of guidelines and standard documents, e.g. National Inpatient Medication Chart				
	Accurately and safely prescribe (common) medications and recognise (potential) administration				
	errors				
	<ul> <li>Know the types, causes and risks of medication errors and adverse drug reactions</li> </ul>				
	<ul> <li>Use standard reporting mechanisms to report medication errors and adverse drug reactions</li> </ul>				
3.	Understand the key features of antibiotic prophylaxis and appropriate therapeutic use, noting local				
٥.	protocols and the Therapeutic Guidelines (Antibiotics)				
4					
4.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take

Recognise indicators for sepsis and implement clinically relevant plan				
5.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  • apply medical knowledge to clinical practice  • implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  • identify when patient transfer is required, and manage risks prior to and during patient transfer  • recognise indications for, and risks of, fluid and electrolyte therapy and blood products  • provide appropriate aftercare and arrange follow up for common procedures  • safely manage anti-coagulant therapy and manage diabetes  • recognise acute cardiac events and use relevant resuscitation/drug protocols  • initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan				
5.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  • apply medical knowledge to clinical practice  • implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  • identify when patient transfer is required, and manage risks prior to and during patient transfer recognise indications for, and risks of, fluid and electrolyte therapy and blood products  • provide appropriate aftercare and arrange follow up for common procedures  • safely manage anti-coagulant therapy and manage diabetes  • recognise acute cardiac events and use relevant resuscitation/drug protocols  • initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  • maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use				
5.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  • apply medical knowledge to clinical practice  • implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  • identify when patient transfer is required, and manage risks prior to and during patient transfer recognise indications for, and risks of, fluid and electrolyte therapy and blood products  • provide appropriate aftercare and arrange follow up for common procedures  • safely manage anti-coagulant therapy and manage diabetes  • recognise acute cardiac events and use relevant resuscitation/drug protocols  • initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  • maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use				
5.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  • apply medical knowledge to clinical practice  • implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  • identify when patient transfer is required, and manage risks prior to and during patient transfer  • recognise indications for, and risks of, fluid and electrolyte therapy and blood products  • provide appropriate aftercare and arrange follow up for common procedures  • safely manage anti-coagulant therapy and manage diabetes  • recognise acute cardiac events and use relevant resuscitation/drug protocols  • initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  • maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use  • recognise and manage fluid and electrolyte imbalances in a patient				
5.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  • apply medical knowledge to clinical practice  • implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  • identify when patient transfer is required, and manage risks prior to and during patient transfer  • recognise indications for, and risks of, fluid and electrolyte therapy and blood products  • provide appropriate aftercare and arrange follow up for common procedures  • safely manage anti-coagulant therapy and manage diabetes  • recognise acute cardiac events and use relevant resuscitation/drug protocols  • initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  • maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use  • recognise and manage fluid and electrolyte imbalances in a patient  • effectively use semi-automatic and automatic defibrillators				
5.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  • apply medical knowledge to clinical practice  • implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  • identify when patient transfer is required, and manage risks prior to and during patient transfer  • recognise indications for, and risks of, fluid and electrolyte therapy and blood products  • provide appropriate aftercare and arrange follow up for common procedures  • safely manage anti-coagulant therapy and manage diabetes  • recognise acute cardiac events and use relevant resuscitation/drug protocols  • initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  • maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use  • recognise and manage fluid and electrolyte imbalances in a patient  • effectively use semi-automatic and automatic defibrillators  • provide appropriate aftercare and arrange follow up for more complex procedures				
5.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  • apply medical knowledge to clinical practice  • implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  • identify when patient transfer is required, and manage risks prior to and during patient transfer recognise indications for, and risks of, fluid and electrolyte therapy and blood products  • provide appropriate aftercare and arrange follow up for common procedures  • safely manage anti-coagulant therapy and manage diabetes  • recognise acute cardiac events and use relevant resuscitation/drug protocols  • initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  • maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use  • recognise and manage fluid and electrolyte imbalances in a patient  • effectively use semi-automatic and automatic defibrillators  • provide appropriate aftercare and arrange follow up for more complex procedures  • recognise when patients are ready for discharge and arrange referral to relevant members of				
5.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  • apply medical knowledge to clinical practice  • implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  • identify when patient transfer is required, and manage risks prior to and during patient transfer recognise indications for, and risks of, fluid and electrolyte therapy and blood products  • provide appropriate aftercare and arrange follow up for common procedures  • safely manage anti-coagulant therapy and manage diabetes  • recognise acute cardiac events and use relevant resuscitation/drug protocols  • initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  • maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use  • recognise and manage fluid and electrolyte imbalances in a patient  • effectively use semi-automatic and automatic defibrillators  • provide appropriate aftercare and arrange follow up for more complex procedures  • recognise when patients are ready for discharge and arrange referral to relevant members of the healthcare team to promote planning for safe discharge				
5.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  apply medical knowledge to clinical practice  implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  identify when patient transfer is required, and manage risks prior to and during patient transfer recognise indications for, and risks of, fluid and electrolyte therapy and blood products  provide appropriate aftercare and arrange follow up for common procedures  safely manage anti-coagulant therapy and manage diabetes  recognise acute cardiac events and use relevant resuscitation/drug protocols  initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use  recognise and manage fluid and electrolyte imbalances in a patient  effectively use semi-automatic and automatic defibrillators  provide appropriate aftercare and arrange follow up for more complex procedures  recognise when patients are ready for discharge and arrange referral to relevant members of the healthcare team to promote planning for safe discharge				
5.         6.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  apply medical knowledge to clinical practice  implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  identify when patient transfer is required, and manage risks prior to and during patient transfer recognise indications for, and risks of, fluid and electrolyte therapy and blood products  provide appropriate aftercare and arrange follow up for common procedures  safely manage anti-coagulant therapy and manage diabetes  recognise acute cardiac events and use relevant resuscitation/drug protocols  initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use  recognise and manage fluid and electrolyte imbalances in a patient  effectively use semi-automatic and automatic defibrillators  provide appropriate aftercare and arrange follow up for more complex procedures  recognise when patients are ready for discharge and arrange referral to relevant members of the healthcare team to promote planning for safe discharge  Can supervise/advise and understands medicines with high risk of adverse events. Double check and document dose calculations				
5.         6.	Identify common risks in older and complex patients, e.g. falls risk and cognitive decline. Take appropriate actions to prevent or minimise harm  Follow-up and interpret investigation results appropriately to guide patient management  Work within unit-based protocols with regard to pre-operative assessment and care, operative procedures and post-operative care:  • apply medical knowledge to clinical practice  • implement and evaluate a management plan relevant to the patient following discussion with a senior clinician  • identify when patient transfer is required, and manage risks prior to and during patient transfer  • recognise indications for, and risks of, fluid and electrolyte therapy and blood products  • provide appropriate aftercare and arrange follow up for common procedures  • safely manage anti-coagulant therapy and manage diabetes  • recognise acute cardiac events and use relevant resuscitation/drug protocols  • initiate resuscitation of the unwell patient. Recognise indicators for sepsis and implement clinically relevant plan  • maintain a clinically relevant patient management plan of fluid, electrolyte and blood product use  • recognise and manage fluid and electrolyte imbalances in a patient  • effectively use semi-automatic and automatic defibrillators  • provide appropriate aftercare and arrange follow up for more complex procedures  • recognise when patients are ready for discharge and arrange referral to relevant members of the healthcare team to promote planning for safe discharge  Can supervise/advise and understands medicines with high risk of adverse events. Double check and document dose calculations  Evaluate outcomes of medication therapy. Monitor and review the patient's response to treatment				

	procedures and post-operative care				
Professionalism & Ethics					
1.	Demonstrate empathy, caring and compassion for patients, their families and carers and treat them with dignity and respect				
2.	Able to learn from mistakes (own and others)				
3.	Identify specific strategies for improving performance based on feedback				
4.	Critically reflect on own performance and make an accurate assessment of this				
5.	Recognise signs of a colleague in difficulty and respond with empathy				
6.	Act as a role model of professional behaviour in the workplace				
Scł	nolarship & Teaching				
1.	Attend unit or morbidity/mortality meetings. Identify any personal knowledge, skills or behaviour changes required				
2.	Participate in departmental or other continuing education opportunities, e.g. journal club				
3.	Reflect on and learn from own observations of clinical practice				
4.	Use a range of strategies aimed at improving patient education				
5.	Use multi-disciplinary team meetings as teaching and educational opportunities				
6.	Provide effective supervision using recognised techniques and skills (availability, orientation, learning opportunities, role modelling, delegation)				
Te	Technical Expertise				
1.	Engage with Basic and Intermediate surgical constructs  • see extract from Essential Surgical Skills document (pp. 11–12)				
2.	Assist with teaching the ten most common skills to junior staff				
3.	Able to assess advanced <u>Essential Surgical Skills</u> constructs (competent with basic and intermediate; pp. 12–14), both for use in current position as well as for surgical education and training (SET) application – career pathway
